

BREATHE EASY™ / SLEEP SNORING

Breathe Easy Splint

Breathe Easy EMA

Breathe Easy Acrylic Herbst

Obstructive sleep apnea (OSA) can be treated in many patients with the use of a removable dental appliance. The most common approach is the forward positioning of the mandible to a "Class III" type relationship to the upper jaw. AOA's appliances offer a range of options – all removable. Appliances can be mechanically attached between upper and lower arches, or a single unit. All appliances require a healthy dental environment but can be modified in material choices to accommodate various considerations such as under-cuts and potential periodontal problems.

The cause of snoring may be a serious medical consideration and it is advisable that all complaints be referred to the patient's physician for evaluation before dental intervention is considered or initiated.
